Lift kit is large center piece, J1 & J2 boulders.

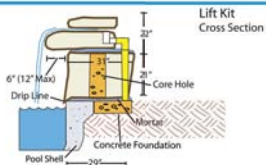

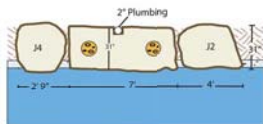

1. Drip Line
2. Concrete Foundation
3. Mortar Bed
4. Mortar

4 Piece Ledger - Modular Cross Section

Lift Kit Footprint

Lift Kit Cross Section

The 4 Piece Lift Kit should be set with a 1-2 inch mortar bed. Flow tends towards the right side but can be diverted by securing small diverter rocks with mortar or construction adhesive. The long narrow top piece covers the pipe but must be mortared to prevent seepage. Wire inserts on the bottom piece are to improve the anchoring quality.

The lift kit adds height; the J1 is now used instead of the J4 boulder. Water might travel down the face of the large main piece so it should cantilever over the pool edge as a drip line. It can be cut for a radius application; call for tech support if needed. The large core holes should be filled with concrete for additional stability, rebar is optional.
